DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over each of Iizuka (2002/0022190), Asanae (5,866,289), and Tsuchiya (3,895,125). Iizuka, Asanae, and Tsuchiya each disclose two component developers where similar toner and carrier particle sizes are shown in direct relation. It is inherent that the toner and carrier particles would be substantially spherical and this is well known in the art. Although the references do not specifically teach toner and carrier particle radius, it would have been obvious to one of ordinary skill in the art to use the toner and carrier particle relationships taught by each of Iizuka, Asanae, and Tsuchiya to arrive at the same conclusion that the carrier radius be 1.5 to 10 times the size of the toner radius because of electrical characteristics directly related to toner and carrier particle size and electrophotographic developer applications as shown by each of Iizuka, Asanae, and Tsuchiya.
